Paulo adds 2nd facility to list of Nadcap approved heat treaters

St Louis, MO – June 22, 2004

The Kansas City, MO facility of Paulo Products Company has been awarded accreditation to the National Aerospace and Defense Contractors Accreditation Program (Nadcap). Nadcap was developed in cooperation with DOD, SAE, and ASTM to certify and accredit suppliers via a third party audit program administered by the Performance Review Institute. Paulo – Kansas City joins American Brazing – Willoughby, Ohio, a division of Paulo, in the NADCAP program. Paulo – Kansas City is unique in that it offers conformance to Nadcap heat treat standards in large continuous belt equipment as well as atmosphere batch and vacuum equipment.

This significant achievement by Paulo is a reflection of its commitment to leadership in the technical, operational, and quality initiatives in the aerospace, defense, and other market sectors.

Doug Manning, Division Sales Manager for Paulo – Kansas City, states “The Nadcap accreditation process is extremely rigorous and involves everyone in the facility. We recognized our customers need for us to have Nadcap accreditation and we all pulled together to meet that need.”

Paulo provides a wide variety of innovative engineered solutions in heat treating, brazing, and metal finishing. Paulo – Kansas City is one of the largest and most complete heat treating facilities in the region, specializing in vacuum, batch, induction, and large continuous belt heat treating. Paulo also offers its customers a broad range of metallurgical services and extensive engineering resources. In addition to the Kansas City, MO plant, Paulo operates facilities in Willoughby, OH, St. Louis, MO, Nashville, TN, and Murfreesboro, TN.
